What is the difference between training institute and Techsan India?

Most students waste their precious time meant to get hand on experience on the latest technologies by either joining Training Institutes or Companies that are actually not developing software in house

Ask the following questions, before joining Training with any company

- Is the company actually a Software Development Company? If not, you may end up wasting your six months and will rue your decision later. Because it will wastage of the time

- Is the company providing training on live projects?

Companies may claim to provide Internship on Client based live project whereas they may not be actively into the field of Software Development.

Is the project live?

- Will you provide Projector classes?

Here will be no any projector

- Is the company going to enrol you into actual Software Development environment? Many students opt to join multinational or big companies only to find that they are made to work in departments such as Customer Support, Technical Support, Marketing, Survey/Data collection etc.

- What project the company is going to give you and will it help you learn the latest technologies?

We will provide you an opportunity to work with a team of Software Developers, under the guidance of project managers

- During the Six Months Training, Students will also go through special sessions on Career Guidance, How to face Interviews and Personality Development.

Registration Process

Industrial Training is a paid training. Company will charge for the cost of seat, time and training from the students.
